

Hazard Alert Live Tomorrow

On Friday May 31, 2024, an underground roof bolter was fatally injured on an advancing miner section. The miner was preparing to roof bolt the last cut of a cut-thru between #2 and #3 entries when he was struck by a large piece of unbolted top.

SAFETY KEYPOINTS:

Roof and rib conditions constantly change in mines

All miners share responsibility to monitor work areas for hazards

If a rib or piece of roof must be pulled, always use a proper bar of suitable length and ensure there is a safe amount of clearance

Miners must never place themselves under unsupported top
